## Lava Lamp

### What you will need:

- Container - this can be a test tube, a cup, an plastic bottle (whatever you use for your lamp container must be see through)
- Oil
- Water
- Steradent Tablets
- Food Colouring (optional)

### Instructions:

1. Pour a third of water into the container.
2. Pour two thirds of oil into the container, which will sit on top of the water.
3. Add a few drops of food colouring.
4. Break up 2 Steradent tablets and drop them in.
5. Have a look at your beautiful Lava Lamp, you should see lots of bubbles coming up through the oil!

### Things to remember

The oil and the ware should not mix together when you put them into the container.

If you're using an old bottle, remember to keep the lid off.

Once it stops fizzing you can add in more Steradent tablets to keep the lava lamp going!
