

Make a Comet Model

Make a fun comet model to hang in your bedroom!

You Will Need:

- Foil
- Tennis Ball (or other small ball)
- Piece of string or pipe cleaner
- Sellotape
- Blue and Green tissue paper

Instructions:

- Wrap your tennis ball in a long layer of foil, leaving a tail of about 20cm.
- Cut your blue tissue paper into strips about 2-3cm wide and 30cm long. You will want about 8-10 strips. Using your sellotape, tape the blue tails around the ball so that they hang down with the foil tail.
- Wrap a layer of green tissue paper around the ball with very little tail, and use your string or pipe cleaner to tie it in place.
- Now you have a model of a comet!

- Nucleus = ball wrapped in foil
- Coma = green glow around the nucleus
- Ion tail = blue tail
- Dust tail = foil tail
