

Challenge: Where's Ally?

One of our team seems to pop up a lot. He may be the result of a hideous cloning experiment gone wrong, or perhaps he's just enthusiastic. He has a beard, red sneakers and a fabulous manbun. How many of him can you find?

Using a pen and paper to make a tally chart to count how many times you see him. To do this, draw a line each time you see Ali. When you get to the fifth line, draw it through the first four. Then repeat this until you have found all the Ali's.

This makes it easier to count at the end.

While searching for Ali and exploring our labs, see if you can also answer these questions:

- What safety equipment are people wearing?
- Is the safety equipment the same in all areas? What's different (look at lab coat colours...)?
- Can you see any robots? (almost all our robots are big grey boxes!_
- Can you see any interesting glassware in the labs? The chemistry side of the laboratory might be good for that search.
- We use a lot of the same cleaning products as at home. Can you find any?
